

MK-CTP – COMPACT INTERMITTENT MOTION TRAY PACKER

Posted on February 6 2014 by ASC

The **MK-CTP** from [AFA Systems Inc.](#) is a new, compact system for tray packing. The MK-CTP will collate products, load products, form trays, and seal loaded trays. A modular design and quick release ratchets allow for rapid, staged processing and convenient maintenance. After a tray has been formed and loaded, the MK-CTP uses a [Nordson Problue 7 Adhesive System](#) to seal the tray. The Nordson Problue 7 system is a seven liter adhesive melter with a piston-pump for exceptional reliability and a graphic interface for convenient operation. When used with the MK-CTP, the Nordson adhesive system can seal major and minor flaps, in conjunction with Festo Pneumatic Cylinders used for flap closure. Problue systems and Mk-CTP are designed for ease of use and reliable performance.
